City & Guilds ACCREDITED

Mould Remediation Foundation

Principles of Mitigation, Assessment and Remediation

This one-day course is designed for office-based staff in insurance, housing, and maintenance who wish to develop their knowledge of mould assessment and remediation.

It is particularly relevant for those responsible for assessing fungal contamination in buildings, where a clear duty of care requires both technical understanding and practical awareness.

The course introduces the core principles and practices of mould remediation within the built environment, providing a solid framework that participants can build on in their professional roles.

Delivery: Live online via Microsoft Teams.

Why Choose City & Guilds?

With over 130 years of expertise in vocational education, City & Guilds was founded to meet the needs of businesses by developing a skilled and reliable workforce. Today, it continues to evolve, creating vocational programmes that reflect the changing demands of industries in the UK and worldwide. City & Guilds accreditation is a globally recognised mark of quality and credibility, assuring learners and employers alike that training programmes are delivered to the highest professional standards.

Course Benefits and Aims

Delegates who successfully complete the course and assessment will be awarded the nationally recognised Dewpoint Professional in Mould Remediation Foundation, accredited by City & Guilds of London.

The course equips delegates with the knowledge and confidence to:

- Manage mould remediation claims more efficiently and effectively.
- Be aware of the process of mould remediation, from mitigation through to remediation, and identify or challenge poor practice.
- Add value to their organisation by applying best practice with greater assurance.

Entry Requirements

The Dewpoint Professional Mould Remediation Foundation is open to all persons (regardless of experience) responsible for claims handling/management, within the insurance, damage management or housing industry. Although no previous knowledge is required, some knowledge and understanding of the insurance, damage management or housing industry would be useful.

Assessment

Assessment of this course takes place at the end of the days training and undertaken on-line as an open-book multiple choice assessment of 25 questions. PASS: 80% or above, REFER: 0-79%.

Where can you go from here?

Once you have attained Course Certification, you are encouraged to further develop your knowledge and skills by completing the Advanced course in Mould Remediation, resulting in a broader and deeper knowledge of understanding.

Additionally, you could complete the associated Dewpoint Professional: Fire and Smoke Restoration and Water Damage Restoration course.

Mould Remediation Foundation

Principles of Mitigation, Assessment and Remediation

Course Syllabus - Delegates should be able to show and illustrate:

Professional Standards, Health and Safety

- Professional standards and legislation (overview): Show awareness of the main legal requirements and industry guidance relevant to mould remediation.
- Principles of mould remediation (overview): Illustrate the basic steps and objectives involved in the remediation process.
- Health, safety, and environmental management (overview): Show understanding of risks to health and the importance of safe working practices.
- Awaabs Law: An overview on the core principles, responsibilities and requirements of Awaab's Law

Understanding Fungal Contamination

- Fungal anatomy and physiology: Illustrate the basic structure of fungi and how this relates to their presence in buildings.
- Growth and reproduction: Show how environmental conditions influence mould growth.
- Hazardous substances produced by fungi: Illustrate the types of substances that may be produced and their potential significance.

Assessment, Mitigation, and Reporting

- Incident loss assessment and reporting: Show how to outline the key elements of an assessment and illustrate simple reporting requirements.
- Mitigation and triage: Illustrate the basic actions that can reduce further damage and begin control of contamination.
- Environmental sampling: Show awareness of the principles of sampling and illustrate where it may be applied.

Remediation Practice and Completion

- Principles of remediation: Illustrate the basic methods used to remove or reduce contamination.
- Completion reports: Show understanding of the purpose of a completion report and illustrate the type of information it should contain.

Pricing

1 – 4 attendees on a course £220 + VAT pp
5+ attendees on a course £210 + VAT pp
