ACCREDITED ACTIVITY 11 CPD CREDITS #1015299

City & Guilds ACCREDITED

# Mould Remediation Advanced

## Mitigation, Assessment and Remediation

This two-day course is designed for damage management practitioners, field-based insurance professionals, surveyors, and housing maintenance managers who wish to develop a deeper understanding of mould mitigation, assessment, and remediation.

Professionals responsible for identifying, managing, and remediating fungal contamination in buildings carry a legal duty of care to others. This requires not only practical skills but also strong technical knowledge across multiple disciplines.

The course introduces the core principles and best practices of mould remediation as applied to the built environment, providing a structured framework for participants to strengthen their expertise and apply it effectively in real-world scenarios.

This course delivers a comprehensive exploration of mould remediation in the built environment, going beyond introductory principles to cover the full range of assessment, mitigation, and remediation practices. Participants will strengthen their professional expertise, gain the technical knowledge required to meet duty-of-care responsibilities, and develop the confidence to apply industry-recognised methods effectively in real-world situations.

Training is delivered live online via Microsoft Teams, with the option of in-person delivery at your location.* minimum numbers will apply.

## Why Choose City & Guilds?

With over 130 years of expertise in vocational education, City & Guilds was founded to meet the needs of businesses by developing a skilled and reliable workforce. Today, it continues to evolve, creating vocational programmes that reflect the changing demands of industries in the UK and worldwide. City & Guilds accreditation is a globally recognised mark of quality and credibility, assuring learners and employers alike that training programmes are delivered to the highest professional standards.

## Course Benefits and Aims

Delegates who successfully complete the course and accompanying assessment will be awarded the Dewpoint Professional Advanced Mould Remediation Certificate, accredited by the City & Guilds Institute of London. The programme is designed to equip participants with the knowledge and practical skills required to understand, implement, and manage professional mould remediation effectively. By the end of the course, delegates will be able to:

- Understand and apply the principles of professional mould remediation in a safe, ethical, and compliant manner
- Demonstrate knowledge of fungal anatomy, physiology, and the specific challenges of fungal contamination in the indoor environment
- Apply best practice in mitigation, triage, initial loss assessment, sampling, and remediation
- Deliver projects in a cost-effective, professional manner with increased confidence
- Remediate, clean, and restore mould-affected surfaces and building fabric to a safe and acceptable standard

## Entry Requirements

The Dewpoint Professional Mould Remediation Advanced Course is designed for those involved in field-based operations within the insurance, housing, or damage management sectors. While prior specialist knowledge of mould remediation is not essential, delegates will benefit greatly from having relevant field experience, as the course builds on practical, real-world scenarios. A basic understanding of English, mathematics, and science will also support successful completion of the programme.

## Assessment

Assessment of this course takes place at the end of the 2nd days training and undertaken on-line as an open-book multiple choice assessment of 50 questions.  PASS: 80% or above, REFER: 0-79%.

## Where can you go from here?

Once you have achieved course certification, you are encouraged to continue building your expertise by progressing to additional Dewpoint Professional courses in Water Damage Restoration and Fire and Smoke Restoration, enabling you to broaden and deepen your professional knowledge and skills.

# Mould Remediation Advanced

## Mitigation, Assessment and Remediation

## Course Syllabus - Delegates should be able to discuss and demonstrate:

- **Introduction to Mould Remediation:** Importance of mould in the environment, need for remediation, and professional standards.
- **Anatomy and Physiology:** Biology and structure of fungi, moulds, and yeasts; their role in nature.
- **Growth and Reproduction:** Basic and specialist growth needs, stages of growth, and their role in contamination; differences in reproduction.
- **Common Indoor Moulds:** Types commonly found indoors; primary, secondary, and tertiary colonisers with conditions.
- **Health Impacts (COSHH):** Risk assessments and effects of mould contamination: allergenic, toxic, infectious, and pathogenic.
- **Awaab's Law:** The course provides an overview of the core principles, landlord responsibilities, and requirements under Awaab's Law, along with the legislative changes coming into effect in October 2025, with a particular focus on damp and mould
- **Modes of Transmission:** How spores and by-products spread, symptoms, and safe working practices.
- **Exposure Control:** Importance of exposure control plans, exposure determination, and compliance methods.
- **Remediation and Safety:** Levels of remediation, precautions for personal/occupant safety, high-risk groups, and engineering/work controls.
- **Mould Inspections and Assessments:** Equipment and techniques for inspections; detecting hidden contamination; report writing and communication.
- **Environmental Containment and Monitoring:** Containment chambers, environment control, and key principles for managing and completing projects.
- **Equipment and Materials:** Types of tools, materials, and chemicals used in remediation; correct use and best practice.
- **Mitigation and Remediation Techniques:** Stages of triage assessment, prevention of secondary damage, emergency mitigation, containment, and decontamination principles.
- **Cleaning and 'Making Good':**

  Assessing affected areas and materials to select appropriate remedial processes; protecting operatives and occupants; ensuring safe environments, ventilation, and preventing cross-contamination.

  Use of dry thermal and ULV fogging, their differences, limitations, and correct chemicals.

  Recording affected materials, communicating remediation methods, and selecting suitable products, including natural treatments, paints, and sealants to reduce future growth.
- **Sampling:** Advantages and disadvantages of swab testing, cultures, and air sampling.
- **Clearance Reports:** Criteria for project handover, methods to confirm successful decontamination, and exclusions in clearance reports.

## Pricing*

**1-4 on a course £478 + VAT pp**
**4+ on a course £458 +VAT pp**

*We are able to train these courses at a location of your choice. Please note all costs incurred on the day are at your cost including hire fees, refreshments and overnight accommodation. We also require a minimum of 10 persons to attend any off-site training. Travel and subsistence for the trainer is usually charged at £250 per night (which include the night prior to the course and the last day of the training).

**To book your place on the next course, please contact Dawn Brumpton 01427 782 994 or email info@dewpointprofessional.co.uk**
